CSCI 3308: Software Development Methods and Tools

Instructor: Alan Paradise

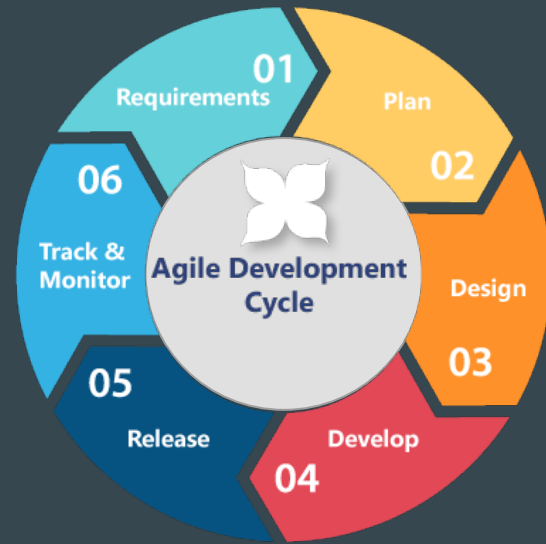

Group member: Woosung Jang, Zoë Koppenhofer, Ryan Whitmer, Pengqi Yin, and Alex Ray

Project Overview

- Testing framework for Physics GRE review
 - Students studying for the Physics GRE
- How does it work?
 - Register->login->customize settings->choose practice test->take practice test
 - Takes questions stored in database, displays for user, verifies correctness

Methodologies

- Peer-Programming
 - Not everyone has XCode
 - Programmers bounce ideas off each other
 - Fills gaps in the other's knowledge
- Agile
 - Weekly/bi-weekly meetings
 - Kept open mind to project changes
 - Assigned implementations to each member at the meetings

Slack

- Communication platform
- Rate: ★★★★★
 - Pros: flexible, good for code/media sharing, cross-platform
 - Cons: none

Heroku

- Deployment environment
- Rate: ★★★★★
 - Pros: free, popularity means support for most languages and frameworks
 - Cons: unintuitive user interface and jargon, no native MySQL support

Trello

- Project management system
- Rate: ★★☆☆☆
 - Pros: visually appealing, fluid, intuitive
 - Cons: difficult to fit any given project into “cards”

Github

- Version control system
- Rate: ★★★★★
 - Pros: useful, extensible, forces good branching/committing practices
 - Cons: learning curve for managing merge conflicts and branches

MySQL

- Database
- Rate: ★★★★★
 - Pros: simple, extensible, relational, support from all major web frameworks
 - Cons: none
- ClearDB MySQL for Heroku deployment
 - Pros: allows for MySQL while using Heroku
 - Cons: Stupidly low data limit

XCTestCase

- Testing class
- Subclass of XCTest from Apple developer tools
- Rate: ★★★★★
 - Pros: ease of use, similar in structure to other testing frameworks
 - Cons: none

Vapor

- Server Side Swift framework
- Rate: ★★★★★
 - Pros: MVC patterns, similar in structure to Laravel, same language for front and backend, great community
 - Cons: very young framework, some lack of documentation

Xcode

- IDE
- Rate: ★★★★★
 - Pros: Swift support, fully featured, Storyboards
 - Cons: buggy code completion and build errors

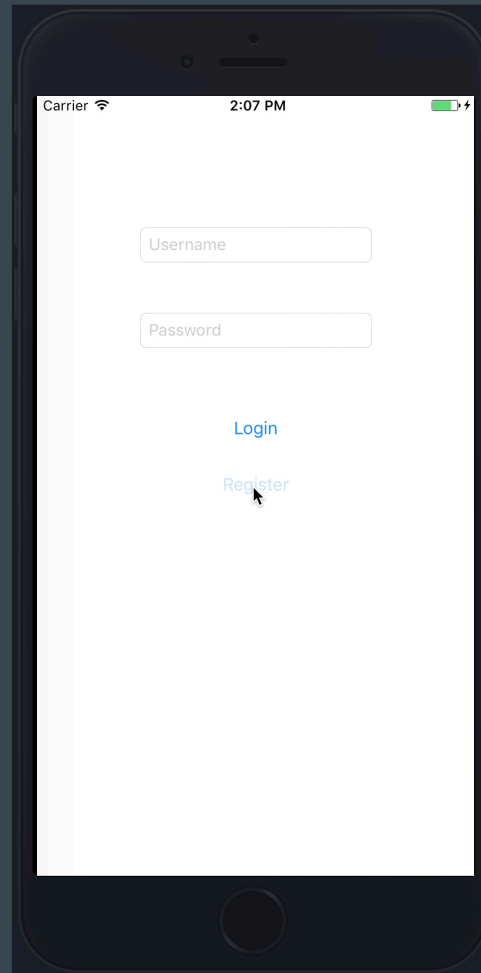

Challenges

- Not everyone has a Mac
 - Pair programming, Swift/Vapor Linux support
- Mathematical notation in questions and solutions
 - Storing and displaying images
- Unfamiliarity with frameworks/technologies
 - Communication, sharing resources

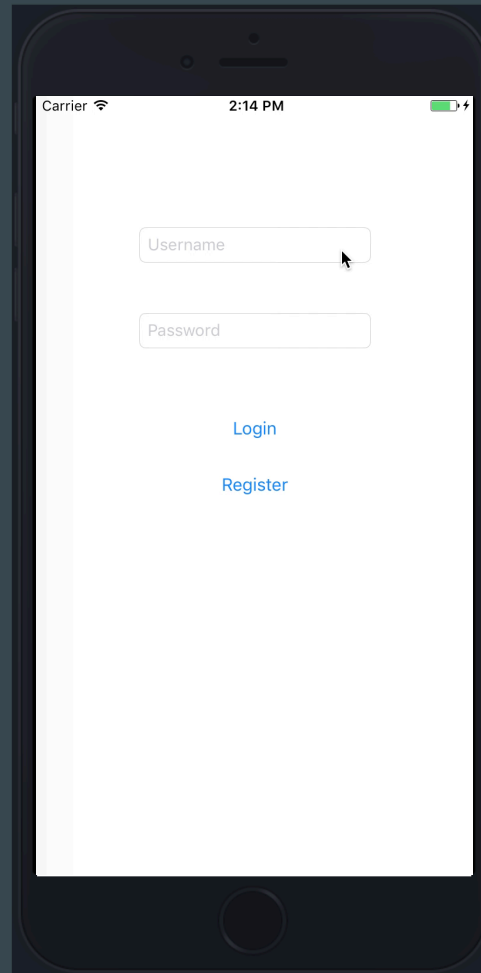

Key Lessons Learned

- Tools
 - How to use Github, Xcode, Heroku, MySQL and SQL clients
- Methods
 - Peer programming, project management (communication, Agile, etc)
- Software development process
 - Connecting frontend to backend, cooperative programming

1.

The figure above represents the orbit of a planet around a star, S , and the marks divide the orbit into 14 equal time intervals, $t = T/14$, where T is the orbital period. If the only force acting on the planet is Newtonian gravitation, then true statements about the situation include which of the following?

- I. Area $A = \text{area } B$
- II. The star S is at one focus of an elliptically shaped orbit.
- III. $T^2 = Ca^3$, where a is the semimajor axis of the ellipse and C is a constant.

(A) I only
(B) II only
(C) I and II only
(D) II and III only
(E) I, II, and III
